# News of Mine, of Prospect, of Furnace and of Mill.

## THE KEARNS-KEITH TO PAY DIVIDEND

Phenomenal Record of a Youngster Among the Bonanzas of a

Great Camp.

THE MANAGEMENT of the Kearns-Keith company's mine and mill reported at the valley furnaces yesterday morning with 442 tons of concentrates, the metallic contents of which compare favorably with the product of any of the plants in that empire of bonanzas, and will follow it up with 890 tons more that accumulated during the period of bad roads between the concentrator and the loading station at Park City. At present the tables and slimers are producing an average of 35 tons daily, those who advanced the sinews with which to develop and equip the mines will have been reimbursed in July and, said the management yesterday, the board of directors will have been by September provided with means with which to begin the distribution of div-idends. The career of the K.-K., the only one of a crop of youngsters that was propagated up there a couple of years ago to win a place among the producers has been characteristic of others with which the founders have been associated. Without estentation whatever it has gradually developed from a prospect into its present promi-nence. M. J. Daily, who has directed the work under ground carning new laurels that are freely acknowledged by the officers of the company. That the Kearns-Keith will maintain a per-manent place among the camp's bread-winners once it is entered among them, the ore bodies already exposed afford conclusive assurance, and yet the great-er resources of the ground embraced within its splendid estate will not have been tapped for some months. The founders as are those who were permitted to join them are to be congratu-lated upon results already achieved; upon assurances that the future holds

#### MINES OF MAMMOTH AND THE OUTPUT

George Robertson, superintendent of the Tintic Mining and Development company's Tintic system of mines came in from camp yesterday morning with the company's properties at Bingham, his destination. Discussing his neighbors at Mammoth Mr. Robertson says the Grand Central is perhaps the more prominently represented in the steady tonnage which is going daily from the mines to the loading station at Rob-inson, the ores, apparently, as good as any ever taken from stopes within its territory. The Mammoth is moving one of many varieties in considerable tonnage, and disposing of much which

ed in the future of the Star Con., which has just been examined by Newt Dunyon and considerable activity is prom-ised there the present season. Of the recent disclosure in the Garnet mine, he says the lessees appear to be put-ting aside a dollar although the streak has developed into nothing big. The locality generally shows an increase in the output over the corresponding pe-riod of last year.

#### ACTIVE WORK TO BEGIN AT OVERLAND

Having designated O. H. Sonne as soperintendent of the Overland mill and mines at Sunshine, Receiver Clarke under the recent order of the District court sitting at Tooele, will proceed at once with the organization of his forces and before the expiration of the week active operations will have been inaugurated. With \$30,000 placed to his credit by those holding the bonded indebtedness, Receiver Clarke is confident of reclaiming the proposition upon which so much was expended for several years, and certainly those conversant with his methods in this State will concur with him in his cheerful views. The management under which it turned up its toes was no doubt intain. Sinking is now in progress from court sitting at Tooele, will proceed at will concur with him in his cheerful views. The management under which it turned up its toes was no doubt inexperienced, knew nothing whatever about the metallurgy of ores as they occurred in the Overland, and that there was disappointment no one had cause to wonder. Mr. Clarke is a miner and a metallurgist and may be relied on to redeem it if the values are present in the rock.

#### UTAH INTERESTS

### ON THE PACIFIC

After an absence of several months, during which he has been revelling in the sunshine of California, Harvey Newell is at home again. In the Utah contingent out there during the winter, Mr. Newell, who was accompanied by his wife, found plenty of companionship, while the colony which has en-tered the diggings there appears to be thriving. Col. Isaac Trumbo is finally in possession of the big gold mines in the southern part of the State, after a protracted contest in the courts, while from the Bully Hill mines and smelter, owned by Capt. J. R. De Lamar, and owned by Capt. J. R. De Lamar, and managed by Hartwig A. Cohen, consignments of copper bullion, containing gold and silver, is being sent at regular intervals to the owner's refinery in New Jersey. The future of the Balakilala group controlled by the Western Exploration company of this city, is now positively assured, says Mr. Newell, every shift under the management of Grant Snyder adding to its agement of Grant Snyder adding to its wealth of copper ore, while much in-

terest is manifested in the placers at Oroville that are being equipped by President Evans of the United States Mining company of Utah and his associates. J. W. Mamm. formerly of this city, is, said Mr. Newell, thriving and in addition to an income from the diggings, stacked up winnings amounting to \$10,000 during his latest coup on the race course, while everybody else appears to be succeeding. Mr. and Mrs. Newell were materially benefitted by their sojourn on the Pacific and are being cordially received by their friends

## CUT THE CONTACT

#### AT THE HALIFAX

A report from Isaac McKay, superintendent of the Halifax company'h, properties at Tonopah, and which reached the local offices yesterday, assures Messrs. Thomas Kearns and David Keith, by whom the control is exerclsed, that at 730 feet the shaft has been penetrated, with drifting upon it to begin in a few days. Meanwhile the responsibility of keeping the waters under control is in the hands of the town, by which they are consumed town, by which they are consumed, this equivalent to a source of considerable revenue considering the cost of fuel, etc., in that locality. That the resources of the Halifux will be made to ultimately compare with those of any proposition in the remarkable camp, President David Keith of the great Silver King, who made a careful study of the group before it was account of the proper in the control of the great silver King. study of the group before it was acquired, has never entertained a doubt nor has he a doubt that the work of the present season will demonstrate it.

#### CALIFORNIA DIRECTORS TO MEET SATURDAY

Judge Wilson I. Snyder, who has returned to his offices after participating in a number of the big scraps before the court at Coalville, says that at a meeting of the directors of the California Mining company to be held on Saturday next, a day will be fixed at which the concentrator shall go into commission for the season. While he has not been permitted to make per-sonal inventory of the ore bodies for some time, he is assured by reports from the superintendent of the proper-ties out of Park City that they have responded most satisfactorily and that recent developments on the intermedi-ate level have been most satisfactory.

#### FOUR FEET OF ORE IN ELKHORN REGION

At a depth of seventy-five feet in the Nelson shaft, Elkhorn region, the vein dips into the mountain and the intention to follow it down with an incline, says the Park City Record. A slight change in the fermation has modified the plan, tonnage, and disposing of much which was permitted to accumulate during the last days of its agreement with the smelter. It is said that very high-grade streaks are being followed on several levels in the old bonanza, any one of which, according to the log of former, is likely to take the management into most productive chambers.

Lessees on the property of the Victor Con are taking out some very fine copper ore while the management of the Lower Mamoth is keeping the bottom of its bins well covered. Much interest, said Mr. Robertson, is manifested in the future of the School and Majestic properties, the Hot Air and the Nabob prospects will be worked steadily, and several others, we understand, will be located in the near future.

Shipments from the Park the previous week were recorded as they follow.

Sh	ipments c were i	from	the Par	k the p	revious
KI	٠				
Daly	West				1,673,000

Mike Fitzgerald, who is pushing development work on the Ingersoll-Ontarlo group, for Salt Lake capitalists, encountered some fine-looking rock this week in the tunnel he is driving to tap the ledge, assays of which run high in silver and lead. The property adjoins the Hawkeye-McHenry on the squth.

Frank J. Gustin and Edw McGurrin of Salt Lake were at the Belmont this week, and state that active work will be commenced there in about two weeks. It will take this time to get the road open andhave new machinery installed. ....4,566,660

#### MUCH GOLD ORE

OUT OF OLD RENO

The Cleopatra mine, located ten miles tain. Sinking is now in progress from the end of the tunnel and a depth of about 75 feet has been attained. The few days ago an exceptionally rich streak was uncovered, assays giving returns of \$240 per ton. Seventeen dollar assays are of common occurrence.

It is understood that Eastern parties are now investigating the mine and

are now investigating the mine and that there is a possibility of a sale being made. In that event it is probable that a mill will be erected on the ground.

#### LEAD ORES IN

PICTURESQUE VARIETY

The ores of lead are noted for their numbers and beauty. The cabinet con-taining the seventy-five or more known ores of lead is an instructive and interestores of lead is an instructive and interesting one, for such a collection has taken years of patience and considerable expense, says the Mining World of Chicago. The ores of lead are without doubt the most beautiful in crystallization and coloring of any of the metals. Most every known color is represented. Crocoite, lead chromate, is red in color Galena is bluish lead gray. Pyromorphite, lead phosphate comes in green, yellow, brown and gray colors. Vanadinite, lead vanadinite, cames in beautiful red and brown colors; nimetite and endilcitie in yellow; wuifenite in green; cerussite in white, and linarite in blue. Native lead is very rare, being found in a cople of localities, one place in Sweden producing most of the specimens. Some native lead specimens have been found in New Jersey, in the United States, but these were of no importance, because of the minute quantity of the lead on the specimens.

#### NEW DISCOVERIES

#### AT MOUNTAIN CITY

A letter from Mountain City, Nev. during the day assures local interests in that region that the discoveries there continue to respond to every blast with everything to denote permanence. On the Greenback, from which samples were brought in recently by Edmund

H. Mead of this city, the showing is said to have grown bigger with every shot, while in an extension of the Nelsnot, while in an extension of the Nelson group rock is being taken out which contains as much as \$25 gold, with 228 ounces silver per ton. A breast of ore four feet between walls in the senior Nelson, on which the mill is ready to go into commission, reveals an average of \$35 gold, with 104 ounces silver, while the rock which came out of that property the day previous to the mailing of erty the day previous to the mailing of the letter showed much free gold with characteristic values in silver. At every point, indeed, mineral is appearing, and those who have studied conditions there are ready to compare the camp with Ponopah at a corresponding period of levelopment. Mr. Mead may leave for

the camp again the present week.
William Willis, a mining engineer
who has been making a study of the camp which in the early day was populated by 5000 souls and was productive of many millions of dollars in gold and illver from lode and placer, says in

port to his clients:
"It remained for the Nelson brothers to demonstrate that the veins of this district went down, and it is due to their faith and hard work that the camp is once more fairly on the road to prosperity. They made several locations on California hill where old shafts. stopes and dumps showed a great deal of high-grade ore had been taken out before, and where old history has it, more than \$2,000,000 of silver was taken from near the surface during the first three years of the camp, and after satisfying themselves that there was still ore remaining in the bottoms of some of these old work-ings, they started a tunnel down near the foot of the hill which was to cross-cut the veins at a depth of more than 500 feet; fortunately for them and for 500 feet; fortunately for them and for the camp, they discovered a blind lead before their tunnel had reached any distance, and as its trend was in nearly the direction they desired to go, they followed it, and after working for four years they had made such a good showing that they interested Messra. Russell & Pedder of Pittsburg, Pa., who took their properties on a bond and took their properties on a bond, and last summer erected a concentrating and plating mill of about forty tons

#### EXPERT EXAMINES THE MAJESTIC PROPERTY

Special to The Tribune.

MODENA, Utah, May 20.-Prof. George W. Maynard and his assistant passed through here yesterday en route from Ploche to Milford. Prof. Maynard goes to Milford at the request of the owners of the Majestic company, who desires him an expert examination of their roperty.
Col. E. F. Freudenthal accompanies the

Col. E. F. Freudenthal accompanies the party and will pilot them over the various properties embraced in the Majestic com-pany's holdings.

It is evident that Prof. Maynard's ex-amination of the Manhattan company's property was satisfactory.

Several parties passed through here yes

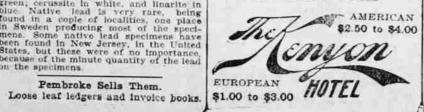

Several parties passed through here yes-terday from Silver Park, Nev. fifty miles from Stateline, and made favorable re-ports of the mineral showing there. Al-though the mineral zone is smull, they helieve that Jesse Knight, on further de-velopment of his property there, will add another producer to his string of good ones. The clay deposits at Modena have re-ceived much attention lately, numerous inquiries being made concerning them, and a number of tests so far made for fire brick and sewer pipe have been pro-nounced satisfactory. A deal by which the deposits will pass into the hands of a syndicate will be made at an early date.

### NO CONFIDENCE IN LAWSON'S SCHEME

That Thomas W. Lawson of Boston ha decided to include the assets of Bingham's big companies in the organization of a \$500,000,000 combine whose interests shall extend from the Lake Superior region on the north to Montana on the west, thence south through this State and Arizona into Mexico, appeared to afford a source of amusement to local managers yesterday morning. Certainly none of them had been admitted to the promoters' ruminations, and some contend that certain obstacles would render such a project impossible. Mr. Lawson may have a way of accomplishing it. He has accomplished a great many things in which he lacked the confidence of the spectator, but it will require a longer period than the balance of the year affords to show the talent in Utah that the project is possible. Segregated, each of the Utah companies enumerated in the list appears to be doing pretty well for their interests, and yet they have not reached the earnings of which they are capable. \$500,000,000 combine whose interests shall they are capable

## THE TRIBUNE NEWS STANDS GOLD GRAVELS OF THE GRAND RIVER

Permanent Equipment With Which to Wash Them Now Installed Along Its Banks.

17 ITH EFFICIENT and economic methods with which to fish It out the Grand river above Moab, this State, should be made one the most productive sources of gold, sald Charley Brown on his arrival from those diggings yesterday morning. That the colors are there in large number every miner who has prospected its gravels has demonstrated, while the only thing at this time between him and a realization of his dream is equip-The plant recently installed by Mr. Brown and his associates has veri-fied it, while a Colorado crowd is now putting in a sixty-horse-power boiler and pumps with which to raise the wa-ters for sluicing, and with this in operation promises to be soon winning much gold. Placer miners from the Snake river, in Idaho, are geiting their bars well in hand as are several others fur-ther up the stream, and as a gold camp the region promises as much activity

as any in the State the present year.

In the same zone are a number of copper properties that promise a big output of copper when they shall have been provided with methods for the re-duction of their ores and yet many op-portunities await the prospector. No region ever put forth better evidence of its possibilities in the realm of copper than is found in the Big Indian group owned by State Schator Loose and associates, while in the Blue Jay, owned by Frank Skewes of Salt Lake, is found some of the richest copper ore ever uncovered in the West.

#### COLORADOANS MAY PUT IN ORE MILL AT CALIENTE

CALIENTE, Nev., May 30.-William Fiske and Barney Hewitt of Cripple 'reck, Colo., were in camp today and examined a number of claims lying contiguous to this camp, and said that there were more promising low-grade properties near Callento than enough to keep forty-stamp mill running if they were all pened up and properly developed.

Mr. Fiske is a member of the Denve nining exchange and has had thirty years' mining experience in Colorado and Montana, and was at one time associated with Senator W. A. Clarke in early Mon-

with Senator W. A. Clarke in early Montana days.

Messrs: Fiske and Hewitt went to Moapa this evening and propose stopping all along en route for the purpose of examining the many premising gold, silver and copper claims which have been located all the away from twenty years ago to recently. They did not mention the ultimate object of their visit, but suggested that if they found sufficient ore in sight to warrant it, they might decide to put in a mill at this point for the treatment of ore all along the line, as the facilities for obtaining water at Callente are superior to any point along the line.

Charles Culverwell has completed ex-

Charles Culverwell has completed ex-ensive improvements on his hotel build-ng at this camp.

Court is in session at Pioche and business men here are kicking because of being drawn for jury duties at the county

Mts. F D. Ulmer, wife of the track en-gineer at the front, arrived today from Salt Lake City and accompanied her husand to his headquarters on the Mo

Mr. Cook, one of the owners of a rich silver-lead property between Callente and Panaca, passed through camp yesterday, en route to Salt Lake City, where he thinks a deal will be consummated for the sale of his property, which has been under bond to Salt Lakers for several months. A carload of ore from his mine went to Salt Lake recently, and it is reported that the values were much higher than anything anticipated by the owners.

John Conray, track foreman at the front, is crowding close to the heels of the Utah Construction company graders with his tracklayers, and has passed the big cut southwest of the Muddy more than three miles, putting in track at the rate of one mile per day, and there is now but thirty-seven miles of track to be laid before the Los Vegas ranch will be connected by rail with Salt Lake City Thero are about ten miles of this work which is rock work, and probably consume nearly thirty days to grade ready for the tracklaying. When this is passed the remainder of the road to the ranch will be put in at the rate of one to one and a half miles per day. West of the Los Vegas ranch there is a comparatively level stretch of desert to connect with the Western terminus, where tracklaying is being pushed eastward to make the connection. In this district the only obstacle encountered it water supply. This is being overcome by pipe lines run from both ends, which are carried forward, keeping pace with the graders, and water cars are utilized as rapidly as the track is laid.

Lieut. Paul Severence, formerly a vol-unteer with the Pennsylvanias during the Spanish war, who saw service and earned promotion in the Philippines, now a pros-perous mining engineer, with headquar-ters in Harrisburg, Pa., passed through camp today en route to Los Angeles. He will stop at several places en route to look ever the mining situation on the San Pedro line in the interest of Eastern capi-talists. . . .

Western Union linemen are pushing the wires ahead rapidly and anticipate having connection made between Callente and Moapa by the last of June if their poles . . .

Frank Paimer has begun development work on his free gold claim one-half mile south of Callente.

Fred Foster will begin development work on the Oliver claim, an extension of the Japan lode, tomorrow.

#### ACTION AGAINST HORSESHOE INTERESTS

George Moody, a merchant at Fay, Nev., has begun suit in Lincoln county to fore-close certain lieus against the Horseshoe mill and mines in that camp, together with the spring and pipe-line by which the plant and properties are supplied. The hearing is scheduled to come up in the District court, sitting at Pioche, on June 18.

#### Prof. Maynard's Work.

Prof. Maynard and Charles Of are still diligently prosecuting the examina-tion that will mean so much to this section, says the Record of Ploche, Nev. The thoroughness with which they do their work is gratifying. The StamHome Beauty is Home Comfort. That's TREE

pede properties are being examined now and later the Royal City properties will get their share of attention.

#### Mining Notes.

Col. C. E. Loose, manager of the Grand Central of Tintle, has returned from Cali-fornia after an inspection of mines now being operated by him at Bodie, with promising results.

A message from Harry Joseph, who went north to sample the Greenback raises in Oregon, indicates that his abtence will continue for some days yet. A correspondent writing from the region eays 'the Greenback, in some respects to one of the best mines in Oregon. It is a famous old standby and has produced fundreds of thousands of dollars, and is still pouring out a stream of yellow metal."

George H. Rebinson

George H. Robinson, managing director of the Tintic Mining and Development company, departed for New York yester-ley to confer with his associates. The active forwarding of copper, gold and silver-bearing matte from the Yam-pa smelter, Bingham, will be resumed the present week.

The delinquent sale of Wabash of Park City will take place June 14 M J. Barron, representing the Mining Reporter, Denver, has gone to Alta to study that camp, in which there is much oreign as well as local interest.

The new retorts with which to reduce the mercurial area of the Sacramento mines at Mercur will enable the management to greatly increase its carnings from that source. It was said yesterday that the directors will post the June dividend today, but it could not be verified. Curtis P. Mason, the popular representative of Fairbanks, Morse & Co., has returned from Denver.

S. M. Levy, superintendent of the Buck-horn group out of Ophir, has returned from camp.

Ore in small parcels is being raised by Superintendent Guenther from the Mar-tha Washington at Tintic, and another consignment is promised the furnaces in

consignment is promised the furnaces in a short time.

The Dexter Mining and Development company, operating at Atlantic City, Fremont county, has contracted with the Atlas-Chalmers company for a complete 10ston mill and a cyanide plant in addition, writes a correspondent from that Wyoming camp. D. G. Caboon, president of the company. Is at present in Rochester, N. Y., at the main office of his company. The Dexter company is building ap an important mining and industrial center at Atlantic City, its mines and waterways being of much importance. The property of the company comprises over fifty quartz mines and claims, 5000 acres of placer property and twenty miles of canals. Along with the rest of the world the brokers joined in the observance of the day and the key was accordingly turned on the mining exchange, business to be resumed this morning.

Mr. Jones, a mining man from Salt Lake.

Mr. Jones, a mining man from Salt Lake City, came in on Monday's stage to look over the mining situation at Highland district, says the Pioche Record.
